DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-33, 69 and 70, drawn to a method of producing an additive carbon black with neat amine antidegradant, classified in class 423 subclass 449.2+.
- II. Claim 34, drawn to a method of producing an additive carbon black having a particular surface area with particular amines and its use in a polymer, classified in class 423, subclass 449.2+.
- III. Claims 35-55 and 71-76, drawn to a method of combining a polymer and a carbon black of Group I, classified in class 524 and 152, subclass 495+ and 151+, respectively.
- IV. Claims 56-68, drawn to a method of combining a polymer and a carbon black treated with particular amines, classified in class 523, subclass 215+ and 351+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP §

Art Unit: 1714

806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the neat amine antidegradant could be any amine compound and because the surface area of the carbon black of Group I can be any value. The subcombination has separate utility such as the treated amine can be used in a coating or an ink composition.

Inventions III and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the neat amine antidegradant could be any amine compound in Group III. The subcombination has separate utility such as coloring thermoplastics and a coating or an ink composition.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for Group II or IV is not required for Group I or III, respectively, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Katz on February 27, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tae H Yoon whose telephone number is (571) 272-1128. The examiner can normally be reached on Mon-Thu.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan can be reached on (571) 272-1119. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
